                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                    Non-human transgenic or somatic recombinant mammals, whose cells contain a heterologous DNA encoding a polypeptide (especially human CD39 protein) having ATP-diphosphohydrolase activity under cellular activating conditions is claimed. In particular the animal is a pig and its cell human cD39 is also useful for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammancory or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence is that of the human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
therapy of inflammatory or immunological stimulation of platelet sgation - using CD39 protein with ATP di.phospho.hydrolase activity, al for preventing or alleviating thrombotic condition in mammalian

The present sequence is the human soluble CD39 protein, a cell surface molecule, having apyrase activity. It is derived from a human B cell line CDMA library, referred to as MP-1. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and cervariant in an angle and the ability to block and reverse ADP-induced platelet activation and cervariant in an angle angines are useful for thibiting angiogenesis. It is useful for the treatment of unstable angina, myccardial infartion, stroke, coronary artery disease or injury, atherosclerosis, peripheral vaccular occlusion, precelampsia, embolism, platelet-associated ischaemia, thrombotic disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including coronary, peripheral and creabral artery thrombosis, intracardiac and venous thrombosis, coogulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, steocclusion, steocclusion, steocclusion, steocclusion, steocclusion, attored.
             Soluble CD39; human, apyrase activity; platelet activation; inhibitor; unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-associated ischaemic disorder; thrombotic disorder; reocclusion; coagulopathy; deep venous thrombosis; DVT; pulmonary embolism; PE; thrombus formation; occlusion; stenosis; restenosis; angiogenesis; antianginal; cerebroprotective; antiarteriosclerotic; anticoagulant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New soluble CD39 polypeptides having apyrase activity, useful for inhibiting angiogenesis and treating unstable angina, myocardial infarction, stroke, coronary artery disease or injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gimpel SD;

                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is soluble CD39 having apyrase activity. Soluble CD39 retains the capacity of wildtype CD39 to metabolise ATP and ADP at physiologically relevant concentrations as well as the ability to block concentrations as well as the ability to block concentration and recruitment including platelet aggregation. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemia disorder including lung ischaemia, and cerebral ischaemia, thrombosis, intracardiac thrombosis, peripheral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, intracardiac thrombosis, creebral artery thrombosis, intracardiac thrombosis, capallopathy, deep vanous thrombosis, intracardiac thrombosis, capallopathy, deep vanous thrombosis, undimonary embolism (PB), cransient ischaemic artack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or retenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

The present sequence is the human CD39 polypeptide. The present sequence or its active fragment may be administered to treat or prevent stroke in a subject susceptible to intracranial haemorrhaging or an ischaemic disorder. The CD39 polypeptide inhibits ADP-mediated platelet aggregation or leukocyte accumulation and/or ATP by increasing ADP catabolism to the subject. It is useful for treating or preventing stroke, thrombotic disorders and ischaemic disorders such as peripheral vascular disorder, pulmonary embolus, venous thrombosis, myocardial infarction, transient ischaemic attack, unstable angina, reversible ischaemic neurological deficit and sickle cell anaemia. It is also useful for treating or preventing a stroke disorder in a subject undergoing heart surgery, lung surgery, spinal surgery, brain surgery, vascular surgery, abdominal surgery, or organ transplantation surgery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating stroke in a subject susceptible to intracranial hemorrhaging and an ischemic disorder, involves administering a CD39 polypeptide which inhibits ADP-mediated platelet aggregation or leukocyte accumulation.

```
The invention relates to a conjugate (I) comprising an enzyme and a biodegradable polymer, where (i) enzymatic activity of the enzyme is biodegradable polymer, to that of the enzyme in the absence of the biodegradable polymer, or (ii) the half life of the enzyme is longer than that of the enzyme in the absence of the polymer. The enzymatic activity (i) is at least 10 (preferably at least 100) times higher in the presence of the polymer. The enzyme is a multimeric, soluble and/or extracellular enzyme, preferably an apyrase, especially a soluble form of CD39 and catalyzes hydrolysis of nucleoside diphosphate. The conjugate can be used to treat diseases relating to abnormal levels of extracellular nucleotides or abnormal aggregation of platelets, particularly cardiovascular disease, cancer, espsis or a disease related to graft transplant. (I) is also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an IL-17, IL-18, 4-1BB, CD30 or OX40 antagonist. The IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists are useful for treating cardiovascular disorders, e.g. (chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restenosis, ischaemia or thrombocytopenic purpura. The present sequence is a polypeptide used in the exemplification of the

The present invention relates to CD39-like polypeptide and its encoding polymucleotide. The invention is useful for preventing, treating or ameliorating autoimmune deficiency disorders including connective tissue disease, multiple sclerosis, specimic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin dependent disbetes mellitus mysathenia gravis, graft-versus-host disease or autoimmune inflammatory eye disease, myeloid or lymphoid call deficiencies, periodontal diseases and other tooth repair processes, inflammatory conditions including inflammatory bowel disease and Crohn's disease, leukaemias and nervous system city inflammatory conditions including inflammatory bowel disease and Crohn's disease, leukaemias and nervous system inhibiting platelet aggregation, food supplement, anti-tissue graft rejection agents, for regulating neurotransmission by ATP in smooth sequence is a human CD39 protein. Note: This sequence is stated to be the same as that shown as SEQ ID 13 in sequence listing, however these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the

uncleotide triphosphatase; NTPase) and their encoding polynucleotides.

The invention is useful in treating cancer, leukaemia and related
disorders such as acute lymphocytic leukaemia, acute myelocytic leukaemia

CC and chronic leukaemia, autoimmune disorders such as multiple sclerosis,
crematoid arthritis, Guillain-Barre syndrome, insulin dependent diabetes

CC rhematoid arthritis, Guillain-Barre syndrome, insulin dependent diabetes

CC disorders such as atthma, respiratory disorders, inflammatory disorders

CC disorders such as atthma, respiratory disorders, inflammatory disorders

CC chon's disease, central and peripheral nervous system disorders such as

CC chon's disease, central and peripheral nervous system disorders such as

CC crohn's disease, human immunodeficiency virus associated

CC systemic lupus erythematosus, human immunodeficiency virus associated

CC wyelopathy and transverse myelopathy and nutritional disorders such as

CC alcohol amblyopia and Marchiafava-Bignami disease. The invention also has

CC alcohol amblyopia and marchiafava-Bignami disease. The invention also has

CC and modulates ecto-ATPase activity. The invention acts as a cytostatic

cagent and is useful in immunotherapy. The present sequence is human CD39

CD protein. Note: This sequence is described in the specification as being

CC sequence listing, however the two sequences are different.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SLYIYKWPAEKENDIGVVHQVEECRVKGPGISKFVQKVNEIGIYLTDCMERAREVIPRSQ 120

               and for identifying compounds that can be utilised for modulating ecto-
Arpase activity. The invention is useful for preventing, treating or
ameliorating a medical condition, e.g. multiple actarosis, rheumatoid
arthritis, autoimmune thyroiditis, diabetes mellitus, myasthenia gravis,
autoimmune inflammatory eye disease, osteoporosis, osteoarthritis,
Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis,
leukaemia or nervous system disorders and in gene therapy. The present
sequence is the human CD39 protein. Note: This sequence is stated to be
the same as that shown as SEQ ID 13 in sequence listing, however these
     markers, and as food supplements and for modulating ecto-ATPase activity
                                                                                                                                                                                                                                                                                                                                                                                       SLYIYKWPAEKENDTGVVHQVEECRVKGPGISKFVQKVNEIGIYLTDCMERAREVIPRSQ

The CD39L4 polymucleotide is useful as hybridisation probes, as primers for PCR, for chromosome or gene mapping, in the recombinant production of protein, and in generation of antisense DNA or RNA. The protein of the invention is used as molecular weight

The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid cited above, a host cell comprising the above comprising at least onclevide acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above an open reading frame of a CA sequence selected from any of the 35 complement), an isolated antibody, (or its antigen binding fragment) that on open reading frame of a CA sequence selected from any of the 35 complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above comprising the above polypeptide, a hybridoma that produces the above contribudy and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody, a pharmaceutical composition comprising the above contribudy and pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody of cancer of cancer cells in an individual, a method for inhibiting a therapeutic agent to cancer cells in an individual, an electronic library comprising the above for antividual, an electronic library comprising the above for antividual, and the expression of a polypeptide for inhibiting the above concerning content activity of a CA protein (CAP), methods for detecting cancer associated with expression of a polypeptide for inhibiting the expression of a method for treating cancers and a method for inhibiting the expression of cancer cancer. The present sequence is a human CAP protein sequence of a nucleic or pell in a lest for this patent did not form agents that inhibiting described and a method for the present sequence as a nucleic or pell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SLYIXWWPAEKENDTGVVHQVEECRVKGPGISKFVQKVNEIGIYLTDCMERAREVIPRSQ 120

                                                                               triphosphateae; NTPase) and their corresponding polynucleotides. The invention also relates to a method for making CD3D proteins. The methods and compositions of the invention are useful for the diagnosis. The methods prevention and/or treatment of diseases or conditions associated with infection, hepatitis, multiple sclerosis, systemic lupus erythmatosus, rheumatoid arthritis, multiple sclerosis, systemic lupus erythmatosus, rheumatoid arthritis, duillain Barre syndrome, thyroiditis, diabetes, present sequence is the human CD39 protein. Note: This sequence is described in the specification as being the same as the human CD39 protein represented in SEO ID NO: 13 of the sequence listing, however the

The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Compositions for diagnosing, prognosing and treating angiogenic disorders including tumor vascularization and heart disease, comprise nucleic acid or polypeptide differentially expressed in angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence. The invention is used to disgnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rhemmatoid arthritis, crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with neovascularization, restenosis due to angioplasty, overproduction of tissue due to cicatrisation, a peripheral vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, arterial restenosis, thrombophlebitis, ischemia, angina, myocardial infarction, chronic heart disease, cardiac congestion or corresponds to a protein encoded by a differentially expressed DNA used in the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Could also be implicated in the prevention of platelet aggregation. Could also Hydrolyzes ATP and ADP equally well.

CATALYTIC ACTIVITY: ATP + 2 H(2)O = AMP + 2 phosphate.
COPACTOR: Requires calcium and magnesium.
SUBUNIT: Homodimer; disulfide-linked (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein (Potential).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytogenet. Cell Genet. 81:287-289 (1998).

-!- FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-!- CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.
-!- COPACTOR: Requires calcium and magnesium (By similarity).
-!- SUBUNIT: Homodimer; disulfide-linked (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

Could a Hydrolyzes ATP and ADP equally well.

-!- CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.
-!- COPACTOR: Requires calcium and magnesium.
-!- SUBURIT: Homodimer, disulfided-linked (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
